# Manhole

## **ECO100**

Redefining Strength,  
Durability, Sealing  
& Environmental Protection

# **ECO100** The Infrastruct

Hofit introduces an injected plastic manhole with a 100 cm diameter, designed for installations up to 6 meters deep. It offers significant advantages over traditional solutions in performance, durability, lifespan, maintenance, and logistics.

## Maximum sealing over time

- Leakproof
- Prevents root penetration

## Modularity

- Simple and economical inventory
- Flexible for field changes
- Easy Instalation at depths of up to 6 meters and up to 5 meters in water-saturated environments

## Made for green environment

- A manhole with unmatched lifespan
- Fully recyclable
- Certified with green standard authorization
- Low carbon footprint

# next generation of ure Manhole

## Extremely strong polypropylene structure

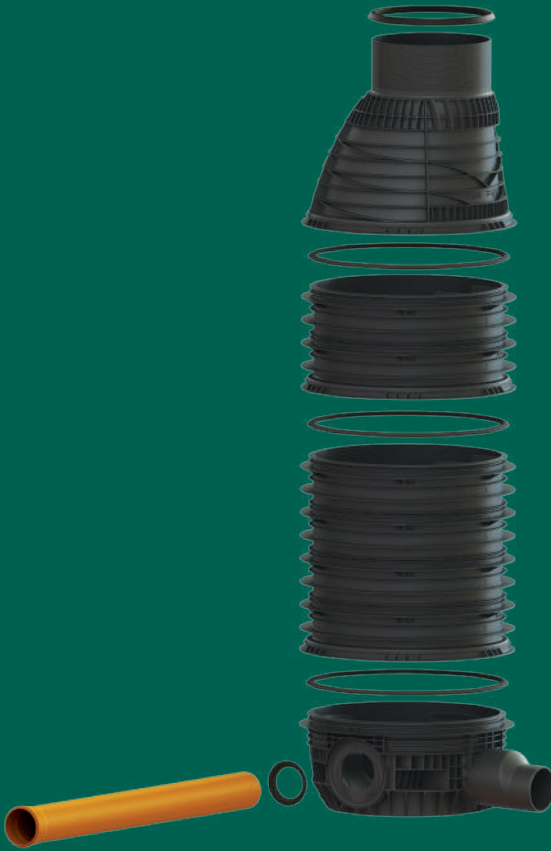

- High resistance in water-saturated soil - 3 times more durable than standard requirements
- Ring stiffness - 2 times stronger than standard requirement
- Sinking of the material and deformation - 2 times more durable than standard requirements
- Load-resistant CLASS E600 with a concrete lid

## Maximum lifetime

- High durability over time
- No corrosion, cracks and root entry
- Surface remains smooth without adhesions
- Simple and convenient operation
